Create Content Once & Publish to Any Experience

Simplify reuse and automatically reflow content based on the specific screen size being used with Xyleme's single-source authoring tool.

Shorten the Content Development Lifecycle

Designed for reuse with fully customizable print and mobile-ready outputs, Xyleme seamlessly applies appropriate branding, page layout, and styling based on the specific output type, speeding up the development process.

Publish Content to any Channel

Publish content to Word, PowerPoint, PDF, HTML5, SCORM 1.2, and SCORM 2004, or directly to XML to feed your own internal downstream publishing systems.

Reuse Content & Track Where it's Used

Because the content is linked — not copied — authors only need to make an update once and it will automatically be updated in all the places where the content is used.

"I estimate we have cut content development time by 66% simply by being able to easily reuse what's already been created."

Allina Health

Are You Ready to Gain Control of Your Content Chaos?

Effortlessly design and publish omni-channel experiences for performance support, training documentation, support materials, competency courses and more. **With Xyleme, there is a better way to author and publish content.**
